

Search profiles - Suchprofile

Synopsis

For a more individual information of current publications, search profiles can be set. According to the parameters set by the user the "Vergabemarktplatz" will filter all current publications. The results can, for example, be used for notification services as well as the welcome page after login. The number of search profiles for each company is not limited. Each user within the company account can define an own set of profiles. Already existing profiles can be edited and/or deleted using the appropriate functions from the "Aktion" column.
